SHARIK ALI

Mobile Application Developer

+92 3408046575 • sharik.charolia3@gmail.com • Karachi, Pakistan • Linkedin

PROFESSIONAL SUMMARY

Over 5+ years of experience in mobile app development building production-grade native Android, IOS & cross-platform applications using Flutter & Kotlin Multiplatform, including regulated banking systems processing real-time payments. Deep expertise in clean architecture, offline-first design, and API integration, with a track record of owning modules end-to-end from architecture decisions through production support. Comfortable working directly with banking clients to translate compliance and regulatory requirements into shipped features.

EDUCATION

Bachelor of Science in Computer Science (BSCS)
Muhammad Ali Jinnah University, Karachi, Pakistan | 2018 – 2022

SKILLS

Languages: Kotlin, Java, Swift, Dart

UI Frameworks: Jetpack Compose, SwiftUI, Flutter Widgets (Material/Cupertino), XML, UIKit.

Architecture & State Management: MVVM, MVI, Clean Architecture, Modularization, BLoC, Riverpod

Networking: Ktor, Retrofit, OkHttp, Alamofire, Dio, RESTful APIs

Data & Persistence: Room/SQLDelight, CoreData/SwiftData, Hive/SQLite. Datastore, Shared preferences

Dependency Injection: Hilt, Dagger 2, Koin, GetIt

Concurrency: Kotlin Coroutines & Flow, Grand Central Dispatch (GCD), Async/Await (Swift & Dart).

CI/CD & Distribution: GitHub Actions, Firebase App Distribution

Testing: Unit & Integration Testing (JUnit, Espresso)

EXPERIENCE

Avanza Solutions | Karachi, Pakistan

Senior Software Engineer | Jan 2025 – Aug 2026

- Owned core banking app modules, services, networking, and local database layers for a live regulated banking client, implementing offline storage validated by unit and instrumentation testing.
- Partnered directly with banking stakeholders to translate regulatory and compliance requirements into technical solutions, reducing rework by clarifying edge cases before implementation.
- Diagnosed and resolved production crashes and defects in live banking features, cutting customer-facing downtime on critical flows.
- Hardened critical transfer and payment flows against network failure with retry logic and offline handling, keeping transactions resilient under poor connectivity.

Software Engineer | May 2023 – Dec 2024

- Designed, built, and maintained Flutter applications end-to-end, balancing performance, responsiveness, and compliance requirements for a banking client.
- Collaborated cross-functionally with UX/UI, backend, and product teams to define technical solutions and ship features on schedule.
- Identified and resolved performance bottlenecks, memory leaks, and crashes, improving app stability and battery efficiency.

Sikander Corporation | Japan | Remote

Software Engineer | Mar 2021 – Apr 2023

- Built Android applications using Kotlin and Flutter, integrating with backend services to deliver a smooth, reliable UI.
- Owned core app infrastructure services, networking, and database integration across multiple projects.
- Implemented efficient local storage solutions and wrote unit and instrumentation tests, improving stability and reducing regressions.
- Collaborated with cross-functional teams to design and ship new features, directly improving user experience.

KEY PROJECTS

Raast Real-Time Payment System — *Dubai Islamic Bank, JS Mobile & Albaraka*

- Built Raast ID management, letting users link their mobile number as a bank identifier for instant, fee-free interbank transfers across Pakistan removing the need to share account numbers or IBANs.
- Developed Raast Request-to-Pay (RTP): approval/denial workflows with OTP verification and real-time transaction status updates.
- Built Raast P2M QR payments end-to-end: QR scanning/upload, merchant identifier parsing, OTP-verified payment, and transaction history with full input validation and failure handling.

IBFT & Fund Transfer Payment Journey — *Dubai Islamic Bank, JS Mobile & Albaraka*

- Designed and built secure, scalable Inter-Bank Fund Transfer journeys covering beneficiary management, account selection, transfer initiation, review, authentication, and confirmation.
- Implemented payment validation and business rules, account validation, beneficiary verification, transaction limits, balance checks to keep transactions safe and compliant.
- Built transaction receipts and transfer history for full customer visibility into past transactions.

Customer Service & Dispute Resolution — *Albaraka & Dubai Islamic Bank*

- Developed a ticket-based customer support feature to handle transaction disputes, account issues, and service requests.
- Implemented role-based workflow management, enabling customers to raise disputes while support agents and admins reviewed, escalated, and resolved cases through defined stages (Open, In Review, Resolved, Closed).
- Integrated real-time status updates and push notifications (FCM) to keep customers informed of ticket progress and resolution outcomes.

Digital Coaching Platform for Early Childhood Educators — *Freelance*

- Built secure account management (registration, authentication, profile setup) and 1:1/group session booking with notifications and reminders.
- Integrated coaching packages with free-trial and upgrade/downgrade flows, and a searchable, filterable resource library of lesson plans and classroom tools.
- Enabled in-app chat between educators and coaches with notifications and feedback sharing.

Chowdeck | Food Delivery — *Chowdeck Logistics*

- Restaurant and menu browsing listings, cuisine menus, search and filters, plus the Chowstore grocery section.
- Cart, checkout and payment flows with clear payment-status and error handling.
- Live order tracking with rider location on the map and FCM/APNs status notifications.
- Crash and bug fixes, performance improvements and store release support.
